                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                modulates N-TAD function and antagonists, agonists, modulators and HIF-1 peptide fragments useful for modulating HIF-1 function or the function of proteins that interact with it. The isolated polypeptides and their fragments with altered residues are useful in methods for treating diseases. The disease is an ischaemic condition, e.g. brain infarction, heart infarction or circulatory disorder. The disease may also be cancer, hypertension, demyelinating disorders, diffuse proliferative plomerulonephritis, toxoplasmosis caused retinochorioiditis, HIV (human immunodeficiency virus) caused Tat anglogenesis, HIV-caused Kaposi's sarcoma, hepatitis-caused inflammation, hepatitis-caused anglogenesis, sarcoma, hepatitis-caused inflammation, hepatitis-caused anglogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 factor-1 (HIF-1) with alterations of the transactivation domain (N-TAD of TAD). Also included are nucleic acids encoding the altered proteins, a vector comprising the nucleic acid, a host cell transformed with the vector, methods for producing the protein or its functional fragment or an isolated degradation box, a method of screening for an agent that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polypeptides comprising hypoxia-inducible factor-1 with alterations of the transactivation domain, useful treating ischaemic conditions, e.g. brain infarction, heart infarction or circulatory disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chronic ulceration, proliferative retinopathy, retina haemangioblastomas, neovascularisation, arterial hypervascularisation, sarcoidosis, bullous skin disease, vasculitis with angiogenesis, dermatomyositis with angiogenesis, dermatomyositis with surfunction arthritis, juvenile osteoarthritis, polyarthritis, aneurysm or atheroma. The present sequence encodes HIF-1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for inhibiting expression of a target compensation of the constraint of the complementary with the target gene and has at least one end a complementary with the target gene and has at least one end a complementary with the target gene and has at least one end a conjugation of constraint of 1-4 nt. The method provides conjugation of the constraint of the constraint of gene expression useful conjugation of gene spreading or conjugation of the constraint of the conjugation of gene expression of conjugation of gene of the conjugation of the conjugation of genes. The method provides more conjugation of gene expression than use of known conjugation of gene expression than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAS14154

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    whose expression differs, by comparing expression under different environmental conditions. The method is useful for identifying mutations and polymorphisms that affect the biological response to a particular cellular process. The method also allows the molecular dissection of biological pathways by altering a particular pathway under study. By introducing a heterologous nucleic acid into a cell population, the level of a particular molecule can be influenced, allowing a pathway to be dissected into its precise molecular components. The main use of the method is to compare gene expression in cells from a diseased patient of the from a normal patient. This sequence represents a human hypoxia inducible factor 1 alpha (HIF-1 alpha) which is inserted into an Adapt tree-GFF plasmid for use in identification of hypoxia-regulated genes in
                                                                                                                                                                                                                                                                                                                 CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2528
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to differential expression screening to identify a genetic element involved in a cellular process. The method involves comparing gene expressions in two cells, where one cell has altered levels of a biological molecule, and identifying the genetic element
           Regulation of trophoblast invasion - by, e. (factor-beta3 inhibitor, useful for detecting
                                                                                                                                                                       07-MAR-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes human hypoxia inducible factor 1 alpha (HIF-1 alpha). The specification describes a composition for regulating trophoblast invasion which comprises an inhibitor of transforming growth factor-beta 3 (TGF-beta3), TGF-beta family cytokine receptors, HIF-1 alpha or oxygen tension. The composition is used in methods of diagnosing, monitoring, preventing or treating conditions requiring regulation of trophoblast invasion, especially preeclempsia in pregnant
             The invention relates to a method of treating a subject having or at risk of developing a haematologic malignancy or multidrug resistance (MDR). The method involves administering hypoxia inducible factor-l

The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening for an agent capable of modulating GCA or an inflammation 'contacting' (M
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              binding molecules or HIF-1-SUMO-1 complex modulators. mdr1-hypoxia responsive element (HRR) binding molecules or antisense nucleic acid molecules and SUMO-1 binding molecules or antisense molecules are useful for treating a subject having or at risk of developing haematologic malignancy or MDR (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoroliferative disorders e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The invention is used in gene therapy. The present sequence is human HIF-lalpha cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS;

The DNA sequence is a composite of 3 clones obtd. by screening an Hep3B library and by database analysis. HIF-1 alpha nucleic acids can be used to prepare recombinant HIF-1 alpha in transformed host cells, as probes, and in the gene thorapy of HIF-1-mediated or hypoxia-related disorders such as atherosclerotic coronary or cerebral artery disease; antisense sequences inhibit HIF-1 expression e.g. to treat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                       to amplify additional flanking sequences from a commercial HepG2 library. MOP1 is also known as hypoxia inducible factor 1 alpha. The factor is induced by low oxygen. It interacts with HSP90 and with ARNT. The ARNT-dimerised factor regulates expression of erythropoietin, among other genes. The invention also provides novel MOPS 2-9 nucleic acids (see AAX58981-88) and proteins (see AAX06289-97). These are useful in a variety of research,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            stimulating an immune response in a patient and for inhibiting the development of a cancer especially lung cancer in a patient. An isolated T cell population is useful for removing tumour cells from biological sample and for inhibiting the development of cancer in a patient. AAS6180-AAS61874 represent novel human lung small cell cancer antigen coding sequences of the invention.
                                                                                                                                                                                     search of human ESTs designed to identify basic-helix-loop-helix-PAS (bHLH-PAS) proteins that interact with either the Ah receptor (AHR)
         diagnostic and therapeutic applications. alpha-class hypoxia-inducible factors.
                                                                                                                                                    or the Ah receptor nuclear translocator (ARNT). To obtain extended open reading frames for each EST, an anchored-PCR strategy was used
                                                                                                                                                                                                                 This is the nucleotide sequence of a cDNA encoding MOP1 (see AAYO6289), a member of the PAS superfamily, where PAS stands for PER/ARNIT/SIM domains. The cDNA was identified in an iterative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         10-JUN-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              So XX
                                                         The invention relates to isolated polynucleotide (I) and CD polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The complex compl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                     whose expression differs, by comparing expression under different environmental conditions. The method is useful for identifying mutations and polymorphisms that affect the biological response to a particular cellular process. The method also allows the molecular dissection of biological pathways by altering a particular pathway under study. By introducing a heterologous nucleic acid into a cell population, the level of a particular molecule can be influenced, allowing a pathway to be
                                dissected into its precise molecular components. The main use of the method is to compare gene expression in cells from a diseased patlent and from a normal patient. This sequence represents pSMART CMV-HIF from a vector expressing hypoxia inducible factor 1 alpha (HIF-1 alpha) which is used in methods of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                 Screening a genetic element involved in a cellular process, comprises comparing gene expressions in a cell, and a second cell that has altered levels of genes used in the process, and detecting an element
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Differential expression; polymorphism; biological pathway; IRES; GFP; internal ribosome entry site; green fluorescent protein; HIF-1 alpha; hypoxia inducible factor 1 alpha; hypoxia regulated gene; macrophage;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) concerns and polynucleotides may be used in the prevention, diagnosis and carefully, they may be used to treat disorders associated with decreased concerns and polynucleotides as associated with inappropriate (I) expression. For concerns a pattent's genome concerns and polynucleotides are to treat disorders associated with decreased concerns and polynucleotides are pattents or deletions in a pattent's genome consultation by rectifying mutations or deletions in a pattent's genome consultation by rectifying mutations of (I). Additionally, (I) concerns and the pattents own production of (I). Additionally, (I) concerns and cards into a host cell and culturing the cell to express the concerns and cancer metastases of haematopoletic-related diseases, especially concerns and cancer metastases of haematopoletic-derived cells. AAK64703 concerns and polynucleotides may be used to provent, and to a provent and cancer metastases of haematopoletic-derived cells. AAK64703 concerns and cancer metastases of haematopoletic-derived cells. AAK64703 concerns and polynucleotides are provent.
                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                      Query Match
                                                                                                                             The invention relates to novel foetal polypeptides encoded by polynucleotides comprising one of 477 sequences fully defined in the specification. The foetal polynucleotides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present sequence was assembled using an expressed sequence tag (EST) found to be expressed in human foetal tissue cDNA libraries as the seed.
